

State of the Business

Cato SASE Cloud. Ready for Whatever's Next

Your business is going digital.

It depends on streamlined global access to applications and data, on premises and in the cloud. Your workforce is increasingly mobile and working from remote, conducting business anytime and everywhere. Your legacy network provider is built around a rigid and expensive integration of multiple third party point products, that can't keep up with a high velocity digital business.

Cato provides a converged SD-WAN and network security as a global cloud service. Aligned with Gartner's Secure Access Service Edge (SASE) framework, Cato SASE Cloud connects all data centers, branches, mobile users, and cloud resources into an agile and secure global network. Our service empowers you to connect, secure, and run the network yourself, and supports you with expert managed services if you need them. Cato's cloud-native architecture delivers a future-proof network that evolves at the pace of your business. With Cato, your network, and your business, are ready for whatever comes next.

Shlomo Kramer

CEO and Co-Founder

One of the founding fathers of the network security industry. He co-founded Check Point Software and Imperva - both multi-billion dollar publicly traded companies. He was inducted into the InfoSec Hall of Fame in April 2013.

Gur Shatz

President, COO & Co-Founder

A leading expert in cloud-scale networking and security infrastructure. He built the Imperva SecureSphere Web and Data security platform and later founded Incapsula, a global DDoS protection cloud service.

Decades of Networking and Security Experience

Cato's management have been working together for many years in multiple successful enterprises.

RingCentral®

“We found that Cato was able to accommodate more than 15 percent packet loss and still maintain a high-level of voice quality, a significant achievement in providing superior customer experience.”

vitesco
TECHNOLOGIES

“The best part about choosing Cato was the fact that they truly felt like a partner in our efforts, and not just another provider we were paying for a set of services.”

ASM 

“It’s rare that you hear from users when things are going well, but, amazingly, during the POC we had users from all over the business thanking us and telling us how much it was improving their daily business productivity.”

 **bugaboo®**

“Cato really is plug and play. It was clear that Cato’s flexibility made switching to Cato less risky than staying with the solution we already had.”

komax

“With Cato, deploying branch SD-WAN became simpler, faster, and with less operational costs than we experienced with a managed service running security processing on SD-WAN appliances.”

JUKI®

“The big difference between Cato and other solutions is the integration of network management and security.”

BOYD 

“Cato Networks’ SASE really is a true cloud solution, not a legacy technology which was ‘rebuilt’ to become cloud-enabled.”

246% ROI in Less than 6 Months

According to a Total Economic Impact™ Study by FORRESTER®

Honestly, **I was shocked to see how easy it was** to set up and maintain an SD-WAN solution based on the whole Cato dashboard. Now there's a saying that with (the previous solution), you need 10 engineers to set it up and 20 engineers to keep it running. With Cato, this all went away. It's in the dashboard. Within the hour, you understand the idea behind it and then you **can just do it.**"

IT Manager, Motor vehicle parts manufacturer

I wanted an 'office in a box', fire-and-forget sort of management plane separation approach, where **my team could do a lot with just shipping a box** out and having a reasonably intelligent individual follow a diagram, plug it in, have it light up in a management portal, and we're in business."

Director of Technology, Advisory, tax and assurance

We don't need to go invest in **those other solutions** because the Cato transport with the **intelligence and the security layer does everything we need it to do.**"

Director of Technology, Advisory, tax and assurance

One of the most beneficial things with Cato is that **with a small amount of people, we can basically manage everything** from one place, and we have merged all the different aspects like VPN, internet access, and WAN. All this now is one service."

IT Manager, Motor vehicle parts manufacturer

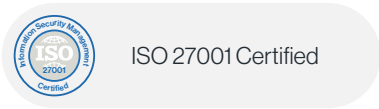

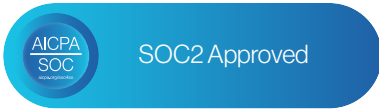

Service

Global Private Backbone

70+ Points of Presence (PoPs) in all major business markets.

Multi Provider, SLA-backed, Self Healing

Enterprise-Grade Network and Security

Available at all PoPs at scale. No need to compromise on network quality or security protection anywhere.

Intelligent Last-Mile Management and Managed Detection and Response

Cato provides the resources and expertise many enterprises struggle with.

World Class Support and Services

24 x 7, global NOC and SOC, with dedicated engineering and support teams.

Cato customers have the opportunity to shape our roadmap and help prioritize future capabilities.

About Cato Networks

Cato is the world's first SASE platform, converging SD-WAN and network security into a global, cloud-native service. Cato optimizes and secures application access for all users and locations. Using Cato, customers easily migrate from MPLS to SD-WAN, optimize global connectivity to on-premises and cloud applications, enable secure branch Internet access everywhere, and seamlessly integrate cloud datacenters and mobile users into the network with a zero trust architecture.
